GASTRO AND BAKERY TRAY FRIENDLY

Gastronorm

Bakery

Useful Information

Blast chilling quickly lowers temperatures to a safe level to prevent bacterial growth. A safe level for food is below 5°C or over 63°C. The blast chilling cycle is designed to drop temperatures from +70°C to 3°C in 90 minutes. This method can also maintain texture, flavour and appearance. Preserve food when staff are available and reheat for service later. Shock freezing over long time periods forms micro-crystals in the water content of food and helps to keep the flavour, texture and colour, making food last longer in your freezer. The product should be portioned and spread evenly over all shelves to obtain weigh/time ratios.

Heavy Duty Blast Chillers/Shock Freezer

Rapid chilling and even faster freezing from these HACCP compliant blast chillers and shock freezers. Ideal for caterers & bakers.
